LA ROCHE COLLEGE

PREFACE.

THE Dictionary of Middle-English[1] compiled by Dr. F. H. Stratmann, of Krefeld, is the only comprehensive dictionary of that stage of the English language hitherto published in a completed state; the only other existing work of the same kind being that of Mätzner, of which the first instalment appeared in 1878, and which has as yet been carried only to the letter J. The third and latest edition of Dr. Stratmann's dictionary was published in 1878, and an extensive supplement was issued in 1881. At the time of the author's death, which took place in 1884, he had apparently almost completed the preparation of a new edition. The copyright of the work was subsequently purchased by the Delegates of the Clarendon Press, and the author's materials for the new edition (consisting of an annotated copy of the printed book) were placed in my hands to be prepared for the press. The unanimous opinion of the scholars in this country who were consulted was that simply to reprint the work in the form contemplated by the author would be wholly unadvisable, and that an extensive revision was needed in order to adapt it to the needs of English students. Although the book was marked by great learning and ability, as well as by extraordinary industry, it had certain serious practical defects, chiefly, it may be remarked, due to those limitations of scope without which it would probably have been impossible for the author to bring his work to completion in any reasonable number of years. The principal respects in which the present edition aims at being an improvement on the original work are as follows:—

1. If the definition of a dictionary be that it is a book which explains the meaning of words, Dr. Stratmann's work can scarcely be regarded as a dictionary at all. With the *meaning* of Middle-English words, the author concerned himself but little; his principal care was to identify them etymologically; that is to say, to connect them with their descendants in Modern-

[1] In the published editions the work is entitled 'A Dictionary of the Old English Language;' but in revising it for a new edition the author substituted 'Middle-English' for 'Old English' in the title-page. He also indicated that in the body of the dictionary the abbreviation 'A.-S.' (Anglo-Saxon) should be changed into 'O.E.'

English, their antecedents in Old-English, and their cognates in other languages. Such explanations of meanings as were given were merely subsidiary to this object. Not infrequently, indeed, words (and those not merely compounds or obvious derivatives) were left without interpretation altogether; in other cases the sense was indicated only by Latin words, which were often themselves ambiguous. Where a Middle-English word was glossed by a Modern-English one, the latter was commonly the etymological equivalent, even though the word might have undergone a complete change of meaning. In a very large number of instances the only vernacular gloss is an obsolete or dialectal word taken from Halliwell's 'Dictionary of Archaic and Provincial Words,' or some similar source, and quite unintelligible to ordinary English readers. The following examples will illustrate the author's method:—**cheowen** . . . *chew* (*chow, chig*), *mandere, objurgare*; **cubbel**, *kibble, fustis*; **galstron** . . . *galster* (*gauster*), *crepare*; **galwen**, *gallow* (*gally*), *terrere?*; **ȝeolpen**, *yelp* (*yilp*), *gloriari, jactari*; **kitelen** . . . *kittle, titillare*; **plaigen** . . . *plaw, ludere*; **schûte** . . . *shout, lembus* [the word means a flat-bottomed boat]; **scorklin**, *scorkle, ustulare*; **snobben**, *snob, singultire*; **slumen**, *sloum, dormitare*. In the present edition, I have endeavoured to provide every word with an intelligible explanation in English. When a word has greatly changed in meaning, I have cited the modern form for the sake of completing the etymological history of the word, but in such a manner as not to mislead the reader as to the earlier sense. As the distinctive feature of the book is that the examples are arranged according to the grammatical forms, and not according to the senses, it is obvious that the shades of meaning could not be explained with the same precision and completeness as in larger works like that of Mätzner, or the New English Dictionary, but it is hoped that the explanations given will be found sufficiently full and accurate for ordinary practical needs. The indication of the parts of speech, which was wholly omitted in the original work, has been supplied.

2. Another inconvenient feature of the original dictionary was its perplexing etymological arrangement. The compound words, instead of being inserted in alphabetical order, were placed under their initial element, even though this happened to be an inseparable prefix. Hence, in order to find one of these words, it was necessary to know, or to conjecture its etymology—or rather, Dr. Stratmann's opinion as to its etymology. Suppose, for example, the word **amaien** is to be sought for in the Dictionary by a student who has no notion of its derivation. The first step of course is to look for it in its alphabetical place. It is not there, nor is there a cross-reference. We next turn to the words under the prefix **a-**, but **amaien** is not among them. The cross-reference **a-**, *see* **ab-**, **ad-**, **an-**, **and-**, **at-**, **en-**, **es-**, **ȝe-**, and **of-**, gives us the choice of ten other places, in any of which the word we are seeking may possibly be found. As a matter of fact, it is placed under **es-**, so that the reader who takes

the natural and proper course of turning to the several places in their alphabetical order will have looked in ten different pages of the Dictionary before he comes to the word he wants. Even this example, however, does not fully represent the complexity of Dr. Stratmann's method of arrangement. The sub-headings under each of the prefixes are not arranged in the alphabetical order of the words themselves, but in that of the original form of their second element; though this rule is sometimes departed from, apparently by mere oversight. To any one unacquainted with Romanic etymology, the arrangement of the words grouped under **com-**, for instance, must appear absolutely lawless. The following is an example of the mode of sequence adopted for these compounds: **congeien, cogitaciûn, coint, cointise, conjure, collecte, culvert, cullin, couche, couchin, comanden.** Romanic philologists will, of course, see at once why this order has been followed, though the position of the word **cogitaciûn** seems to be due to some mistake. But the majority of those for whom a Middle-English dictionary is intended cannot be expected to find their way readily through such a labyrinth. It has, indeed, often happened that even scholars have erroneously stated a word to be wanting in Stratmann, when in fact it had not been overlooked, but had been recorded in some unlikely place. In this edition I have in the main adopted alphabetical order. Compounds of substantives and adjectives, however, and of words like **biforen** and **anȝēn**, are grouped under their first and most important element; and agent-nouns in **-ere** and nouns of action in **-ing** follow the verbs from which they are derived. These compounds and derivatives are printed in smaller type and indented, so as not to disturb the general alphabetical arrangement.

3. In cases where a foreign word has come into English by two different channels, and with consequent diversity of form, Dr. Stratmann's usual practice is to treat the word as one. In some instances, where the two forms existed merely as dialectal varieties, without any sense-distinction, this procedure has its advantages; but in others it obscures the facts. The words **desk** and **dish**, for example, both descend ultimately from the Latin **discus**, and therefore in the former editions of this dictionary they are put together as one word. This would be permissible if (as any one would suppose from reading the article) the two forms were employed promiscuously in Middle-English. But the fact is that in that period of the language the words were quite as clearly distinguished as they are now. I have in this and other similar cases separated the two words. It now appears to me that this ought to have been done still more frequently: the verbs **chácen** and **cacchen**, for example, would be better separated.

4. The words which in primitive Teutonic began with **hl-, hn-, hr-** are in the former editions of the dictionary given under the letter H. As the initial **h** is very generally omitted in Middle-English, this arrangement imposes on

the reader (unless he knows the etymology of the word) the necessity of searching in two different places. I have therefore removed these words to the letters L, N, and R respectively; prefixing, however, an italic *h* to distinguish them from those which have an unaspirated initial.

5. One of the most important changes which have been introduced in this edition relates to the notation of vowel quantities. In the original work the quantities marked were not those which the vowels had in Middle-English, but those of the earliest Old-English, although it is well known that extensive changes in vowel quantity had taken place before the end of the twelfth century, and probably much earlier. The author's procedure in this respect is not, indeed, so wholly irrational as it may at first sight appear. The Old-English quantity admits of being ascertained with tolerable precision, while Middle-English quantity is in many cases uncertain, and in other cases varies according to locality and period. Moreover, the primitive quantity is that which is of greatest etymological importance. I have, however, ventured on the attempt to give a representation of the actual quantity in Middle-English in such a manner as to exhibit its relation to the earlier quantity. Dr. Stratmann employed the circumflex (^) to denote a vowel which was originally long and stressed, original length without stress being indicated by the macron (¯). In my notation the macron is placed over an original long vowel which remained long in Middle-English; an original long vowel which has become short by position is marked (˘); and a short vowel which has been lengthened by position is marked with the acute accent. (It might perhaps have been better to use the circumflex for this purpose instead of the acute.) Original short vowels which remained unchanged in quantity are left unmarked. It is hoped that this notation will serve to render more intelligible the manner in which changes of quantity influenced the qualitative character of Middle-English vowels. In many points the correctness of my quantitative indications will be somewhat disputable. The vowels **a, e, i, o** before **ld** I have marked as 'new long,' except under special conditions which modify the general rules. Similarly I have recognised a lengthening of **i** and **u** before **nd**. The lengthening of **e** before **nd** and before **n** followed by a palatal **g**, certainly prevailed to a considerable extent, but I doubt whether it was at all so general as the other lengthening, and I have therefore left it unmarked. For similar reasons the lengthening effect of **r**, followed by a voiced consonant, has not been regarded. There is room for much doubt whether the later positional lengthenings persisted in spite of loss of stress in the second element of a compound. In such cases I have left the vowels unmarked, except where special evidence seems to show that the lengthened quantity was retained. With reference to words of Romanic or Latin origin the question of quantity is very perplexing. Dr. Stratmann correctly recognised that Latin quantity as distinguished from Latin accent had in

general no influence on Middle-English pronunciation, and has therefore treated the unaccented vowels in words derived from Romanic and Latin as (proximately) short, with the exception of those that have compensatory length. I have followed his example in marking as long the vowels in final syllables like **-āge**, **-ōn**, **-tē**, **-ūre**, &c., which originally were stressed, though owing to a shifting of accent which began, at latest, in the fourteenth century, this notation cannot be regarded as correct for the whole Middle-English period. I should now prefer to mark with the circumflex all Romanic and Latin vowels which were positionally long in early Middle-English, whatever their original quantity, and to leave the rest unmarked.

6. In one instance I have ventured to introduce a diacritic expressive of vowel quality. I have employed the character ü to distinguish the cases in which a Middle-English **u** expresses either the sound which descended from Old-English **y**[1], or some sound but slightly different from this. It is clear that in some early loan-words from French, the **u** was at first sounded in much the same way as the English ü, ṻ, and I have therefore in these instances marked it with the two points. I now regret not having made a more extensive use of diacritics. The tailed ǫ, ǭ ought to have been used for Middle-English **o** when representing an Old-English **a**, **ā**; the palatal sound of **g** also might with advantage be distinguished with a special sign.

7. In the etymologies I have attempted to distinguish between direct derivation and collateral relationship of words[2], and have also rectified many errors of detail. Dr. Stratmann's work in this department was eminently scholarly, but the fresh light thrown on many points of comparative Teutonic phonology, by the researches of the past few years, often necessitates an alteration in the form, and sometimes in the substance, of his statements. One error which frequently occurs in the previous editions is that the Old-English verbs in **-ian** are identified with the continental Teutonic verbs in **-jan** instead of with those in **-ōn**, while the umlaut verbs, really corresponding to the continental verbs in **-jan**, are treated as if peculiar to English.

8. Although the present edition has no pretensions to be regarded as an exhaustive dictionary of Middle-English, it contains a very large number of words not found in the former editions. The author's interest was chiefly in the Teutonic portion of the language, and in his work as originally issued the words of Romanic and Latin origin were almost wholly absent. In deference to the opinion of English scholars, many of these were inserted in later editions, but even in the author's last revision the vocabulary was still conspicuously

[1] In the case of the combination **wur** I have left the **u** unmarked, since even in Old-English **wyr** often became **wur**.

[2] It should be clearly understood that the Middle-English forms are by no means always the direct descendants of the particular dialectal form in Old-English that happens to be quotable.

defective with regard to the Romanic element. Besides this, many other words, sometimes of considerable literary importance, appear to have been intentionally omitted, because owing to their doubtful derivation they could not be conveniently brought under the etymological arrangement adopted in the work. In the selection of new words for insertion I do not profess to have followed any systematic method. It is probable that many really important words have been overlooked, while some have been inserted that might well have been spared. While I have not expunged the proper names inserted by the author himself, I have not added any others. By further abbreviating the references, which though occupying much space were not full enough to be understood without the help of the table of contractions, it has been found possible to compress the much augmented work into about the same number of pages as were contained in the third edition, together with the supplement.

There are several features of the dictionary which I do not myself regard with approval, though for various reasons I have refrained from altering them. One of these is the normalized orthography of the quotations. My own view is that the quotations, though *not* the headings of the articles, ought to be given in the spelling of the MSS., or at least in that of some standard critical edition; but the gain of textual correctness would not be commensurate with the expenditure of time and labour which would be needed to conform every quotation to the original. Some special points in Dr. Stratmann's system of normalized spelling now appear to me objectionable; for example, he uses the letter **v** not only when the **u** or **v** of the MSS. had the sound of **v**, but also where it had a different consonantal power (=**w**), as in **qvailen**, **gverdōn**, and **zvo** (Ayenbite). In words taken from early texts which use **g** for **ȝ**, the former letter is retained, even in the lemmas, although the process of 'normalizing' would seem to have more justification here than in most other cases. The complaint often made that Dr. Stratmann chooses as the 'dictionary forms' of Middle-English words not those of the period of Chaucer and Langland, but those nearest to the Old-English, does not seem to me to be of great moment; the inconveniences of this course being counterbalanced by the advantage of presenting the various forms in something like genealogical sequence. The author, however, did not sufficiently recognise the fact that the orthographical coincidence of Middle-English with Old-English is often merely accidental, especially when the digraphs **æ**, **ea**, **eo** are concerned; and most of the articles on words containing these digraphs would need to be rewritten in order to make their arrangement correctly expressive of the facts. A peculiarity of Dr. Stratmann's method, which may cause some embarrassment to the student who is not aware of it, is that he treats 'improper compounds' not as single words but as phrases. Thus the preposition **bisīde** does not occur in its alphabetical place, but examples of it (written **bī sīde** in two words) are

found in the article sīde. I have in many cases inserted cross-references to obviate the difficulty arising from this cause.

I am painfully conscious of many serious shortcomings both in the plan and the execution of this edition. The numerous errata will probably seem to some critics to imply extreme carelessness on my part. To this fault I cannot plead guilty; though for many of the oversights I am able to account only by the state of ill-health from which I was suffering when the earlier sheets were passed for press; and if I had then possessed the experience I have subsequently acquired in lexicographical work, I should have known how to take more effectual precautions to ensure accuracy[1]. An assiduous study of Middle-English during the progress of the work has shown me many points in which my knowledge was at the outset materially defective. Perhaps I may reasonably hope for some degree of indulgence on account of the special difficulties of my task. Dr. Stratmann's references are often to books or editions which were not easily accessible to me—some of them, indeed, not to be found even at the British Museum; hence it was frequently not until the article had gone to press that I discovered that he had mistaken the meaning of a word, or had confused together words of different origin and meaning; or, in other cases, that I had given a wrong interpretation to his Latin gloss. The difficulty of accurate proof-reading will be obvious to any person, at all experienced in such work, merely from an inspection of the pages; but it was greatly augmented by the fact that the author's large mass of MS. corrections and additions were made in such a manner that it constantly required the closest attention to discover where the additional words were intended to be inserted. If my attempt to indicate Middle-English vowel-quantity be regarded as in itself justifiable, I may fairly claim that its occasional errors and inconsistencies may be judged with the leniency due to pioneer work. However, although this edition is very far from being such as I should have wished to make it, I venture to hope that in spite of its defects the book in its new form will be found far more useful than if it had been re-issued with merely such slight revision as was contemplated by the original author.

HENRY BRADLEY.

[1] One thing which I especially regret is that a few quotations and references have been inserted at second hand, matter which I had caused to be transcribed for me having been sent to the printers under the mistaken belief that it had been properly verified. I hope, however, that all the important errors arising from this cause have been duly noted in the supplementary pages printed at the end of the volume.
